

Erika Bowen, Senior Geologist / Petrophysicist

Working at Schlumberger in the petrophysics arena since 1999, Erika has led numerous geotechnical interpretation projects and teams, developing integrated petrophysical models of petroleum fields. She has worked with most types of sensor data, particularly those used in well logging. She also has a strong geomechanics background (including fracture stimulation modeling), and has significant experience in formation testing and sampling, core analyses, well integrity investigations, and deployment of fiber-optic Distributed Temperature Survey (DTS) systems. Since joining GeothermEx in 2016, Erika has applied all of these skills and more in the geothermal domain.
