

Jonathan Hernandez, Senior Geologist / Drilling Specialist

Jonathan provides geothermal engineering and technical consultation to reduce costs and risks while meeting the expectations and deadlines of GeothermEx's clients. His geologic background focuses on resource geometry and structural interpretation, while his engineering experience allows him to customize solutions of exploration and field development, such as well targeting, infrastructure, budgeting and procurement. His project experience covers all aspects and scales of geothermal development and has been applied in both emerging and developed markets, including numerous projects for development finance institutions around the world. Jonathan has significant experience in geothermal due diligence and technical assessment projects.
