

NUMERICAL SIMULATION EXPERIENCE

GeothermEx has conducted three-dimensional numerical simulation of more different reservoirs than any other organization in the world – nearly 60 to date. Our experience includes numerical simulation of all categories of geothermal systems:

- Single-phase water systems
- Single-phase steam systems
- Two-phase (water and steam) systems
- Two-phase systems with CO₂ gas
- Hyper-saline brine systems
- Systems with magmatic heat transfer
- Single porosity and dual porosity systems
